The Walsh College Pension Plan was "hard frozen" as of July 1, 2010. Average accrued benefits are shown in lieu of compensation.

Schedule SB, Part V – Statement of Actuarial Assumptions/Methods**EIN/PN 38-1111111/001****Walsh College Pension Plan****Actuarial Methods for Funding and Present Value of Accrued Benefits****Liability Valuation Method****Funding Target and Target Normal Cost as Defined in PPA**

The Funding Target is defined to be the present value of the benefits accrued or earned at the valuation date. The earned benefits include retirement-type benefits and ancillary benefits (1.430(d)-1(c)(1)(i)). If the amount of a benefit that is expected to be paid is neither a function of the accrued benefit at the time the benefit is expected to be paid nor a function of the participant's service at that time, then the portion of the benefit taken into account for purposes of determining the Funding Target for a plan year is based on the proportion of a participant's service as of the first day of the plan year relative to the service the participant will have when the participant decrements. The portion of the benefit that is taken into account in the Target Normal Cost is the increase in the proportional benefit for the plan year (1.430(d)-1(c)(1)(ii)(C)). The determination of the Funding Target and Target Normal Cost of a Plan for a plan year is not permitted to take into account any limitations or anticipated limitations under section 436 (1.430(d)-1(c)(1)(iii)).

The Target Normal Cost is the present value of all the benefits expected to accrue or to be earned during the year (benefits attributable to services performed in a prior year that are increased by reason of a compensation increase in the current year are treated as having accrued during the current year). Plan administrative expenses paid (or expected to be paid) from Actuarial Value of Assets for a plan year are not reflected in the determination of a plan's Funding Target for that plan year (1.430(d)-1(c)(2)), but are reflected in the determination of a plan's Target Normal Cost.

Generally if insurance contracts are held by the Plan, they are included in Actuarial Value of Assets and the related benefits are included in the liability. In the case of benefits that are funded through insurance contracts purchased from an insurance company licensed under the laws of a State, the Plan is permitted to exclude the benefits from the liability and the insurance policy from the assets, but only to the extent that the right to receive benefits is an irrevocable contractual right based on premiums paid prior to the valuation date (1.430(d)-1(c)(3)).

The determination of a Plan's Funding Target and Target Normal Cost for a plan year is based on Plan provisions that are adopted no later than the valuation date for the plan year and that become effective during that plan year. Section 412(d)(2) applies for purposes of determining whether a Plan amendment is treated as having been adopted on the first day of the plan year (including a Plan amendment adopted within two and one half months after the close of the plan year) (1.430(d)-1(d)).

For maximum deductible purposes, the cushion amount is equal to the sum of 50 percent of the Funding Target for the plan year and the amount the Funding Target for the plan year would increase if the Plan were to take into account increases in compensation which are expected to occur in succeeding plan years. If the Plan does not base benefits for service to date on compensation, increases in benefits which are expected to occur in succeeding plan years (determined on the basis of the average annual increase in benefits over the six preceding plan years) are taken into account in lieu of expected increases in compensation. For plans that have less than 100 participants, increases in benefits for highly compensated employees as a result of Plan amendments within the last two years are excluded from the calculation of the cushion amount.

Actuarial Methods for Funding and Present Value of Accrued Benefits

Asset Valuation Method

Actuarial Value of Assets are determined using the two-year averaging method as set forth in Notice 2009-22. Under this method, the Actuarial Value of Assets is the average of the fair market value of the assets on the valuation date and the adjusted fair Market Value of Assets determined as of the two prior determination dates. The adjusted fair Market Value of Assets as of a determination date is the Market Value of Assets on that date, increased by contributions that were not included in the plan's asset balance on the determination date and decreased by benefits and administrative expenses between that determination date and the valuation date plus an adjustment for expected earnings as the sum of the expected earnings separately determined for each period between the determination date and the valuation date. The calculated value is then further constrained to be no more than 110% of the Market Value of Assets plus discounted receivable contributions and no less than 90% of the Market Value of Assets plus discounted contributions.

Procedures

Financial and census data: Financial data was submitted by the Trustee and census data was submitted by the employer. Information provided was reviewed for internal consistency and we have no reason to doubt its substantial accuracy.

No benefits of materiality were excluded from the valuation of the liabilities.

The limitations of the Internal Revenue Code 415(b) and 401(a)(17) have been incorporated into our calculations.

No liability is included for participants who terminated without vesting in their benefit prior to the valuation date.

The employer provided us with the data on its employees as of the valuation date, but only those employees who have completed the Plan's eligibility requirements are included in the valuation of liabilities.

Method Changes Since Last Year

There were no method changes since the prior valuation.
