Actuarial methods

Under the actuarial methods described below, if all current assumptions remain constant and are realized, funding at least the minimum required contribution each year will eventually accumulate sufficient plan assets to cover the funding target.

Cost method

Costs have been computed in accordance with the unit credit actuarial cost method and reflect the actuarial assumptions described under “Actuarial assumptions” of this report as provided under the applicable regulations of the Pension Protection Act of 2006.

Accrued vs. vested benefits

Accrued benefits are the benefits accumulated according to the service, compensation, and benefits outlined in the plan provisions. Vested benefits are the same except that they exclude the following, if applicable:

- Benefits for non-vested participants
- Death benefits over the value of the plan’s qualified pre-retirement survivor annuity (QPSA)
- Disability benefits over the value of the standard termination or retirement benefits for participants who are not disabled as of the measurement date
- Benefits over the value of the standard termination benefits for participants who have not attained eligibility for early retirement and supplemental benefits as of the measurement date

Target normal cost

The target normal cost is the present value of benefits expected to accrue during the plan year plus an estimate of the expenses to be paid from plan assets during the plan year.

Funding target and funding shortfall

The funding target is the present value of benefits accrued as of the beginning of the plan year and the funding shortfall is the excess of the funding target over the actuarial value of assets (reduced by the credit balance). The initial funding shortfall is amortized over 15 years.

In subsequent years, the funding shortfall less the present value of prior year amortization installments is amortized over 15 years, and added to any prior year amortization installments.

The funding target is developed based on the full yield curve published from the month prior to the valuation date.

Sponsor elections

Discount rate: Full yield curve based on the average daily corporate bond yields from the month prior to the valuation date.

Mortality table: Prescribed IRS generational mortality table

At-risk determination

The at-risk funding target is determined by assuming that participants eligible to retire in the current plan year and next 10 plan years retire at the earliest possible date, but not before the end of the plan year. All participants are assumed to elect the optional form resulting in the highest possible present value.

A load is added to the at-risk funding target and at-risk target normal cost when a plan is at-risk in at least two years during the preceding four years. The load increases the at-risk funding target by 4% of the not at-risk funding target plus \$700 per participant, and increases the at-risk target normal cost by 4% of the not at-risk target normal cost.

The funding target and target normal cost are calculated by multiplying the not at-risk values by 100% minus the phase-in percentage, plus the at-risk values multiplied by the phase-in percentage.

Credit balance

The credit balance consists of the carryover balance from excess contributions prior to the Pension Protection Act (PPA) of 2006, plus the prefunding balance from elected excess contributions after the PPA. Balances accumulate with interest and are reduced for amounts applied towards the minimum required contribution, voluntary waivers by the plan sponsor, and compelled waivers to avoid benefit restrictions. The actuarial value of assets is reduced by the credit balance to determine certain funded percentages and to determine the funding shortfall.

Asset valuation method

The actuarial value of assets is determined using an annual average of the adjusted fair market value of assets with the earliest determination 24 months prior to the valuation date. The fair market value of assets in prior years is adjusted for contributions, benefit payments, expenses and expected earnings (not to exceed the third segment rate).

This is equivalent to the fair market value of assets, plus two-thirds of the (gain)/loss from the prior year, plus one-third of the (gain)/loss from the second preceding year. The (gain)/loss in each year is the difference between the expected and actual returns on the fair market value of assets.

The actuarial value of assets is adjusted to be no less than 90% or no more than 110% of the fair market value of assets, as required by IRC Section 430(g)(3)(B)(iii).

Since the expected earnings assumption cannot exceed the third segment rate, over time, the method may produce an actuarial value of assets slightly below the fair market value of assets.

The actuarial value of assets for determining the maximum tax deductible contribution reflects interest rate stabilization rates for discounting contributions and limiting expected earnings.

Actuarial assumptions

Funding Assumptions:

The discount rate and mortality assumptions are prescribed assumptions set by law. All other assumptions are non-prescribed assumptions set by the actuary which reflect estimates of future experience, are appropriate for the purpose of the measurement, consider relevant plan characteristics, and contain no significant bias unless otherwise noted. Relevant historical information, such as credible plan experience and experience from representative populations, was considered in the selection of the non-prescribed assumptions with a significant effect on the measurement. Factors that may affect future experience and the views of experts were also considered.

The investment return is based on the plan's asset allocation and reflects a weighted average of expected returns by asset class.

ASC 960 Assumptions:

All assumptions are set by the plan sponsor and they align with the Funding Assumptions except for the mortality assumption. Note that the discount rate for ASC 960 aligns with the Investment Return assumption used in the ERISA Funding measurement.

The mortality assumption reflects experience from representative populations, based on the Pri-2012 Private Retirement Plans Mortality Table Report issued by the Society of Actuaries (SOA) in October 2019 and the Mortality Improvement Scale MP-2021 Report issued by the SOA in October 2021.

Below are the actuarial assumptions as of December 1, 2024.

Discount rate:

Effective rate: 5.34%

Funding target liabilities: November 2024 full yield curve

ASC 960 rate: 5.75%

Investment return: 5.75% per year

Estimated expenses: The expected PBGC premium rounded to the nearest \$5,000. For 2024, this is \$65,000.

Retirement age: Age 65. Participants at or beyond this age are assumed to retire immediately.

2024 Schedule SB
Line 22, Description of Weighted Average Retirement Age

It is assumed that 100% of the participants will retire at age 65.

Plan provisions

Earnings

Total compensation paid or accrued for services performed in the calendar year. Effective in 1994, the maximum salary permitted is \$150,000 as indexed for subsequent years. Prior to 1994, the salary maximum was \$200,000 as indexed for years subsequent to 1989. The 2011 maximum salary permitted is \$245,000. No earnings beyond January 1, 2012 will be recognized by the Plan.

Final Earnings

The highest average annual Earnings received during employment with the employer for any five consecutive calendar years, or the Participant's period of employment, if shorter. Earnings in the year of termination will only be taken into account if the Participant terminates on the last day of the calendar year. The Final Earnings calculation will incorporate only earnings before January 1, 2012.

Service

All years of Service with the Employer from date of employment to the earliest of retirement, termination of employment, or death. Effective December 1, 1994, Vesting Service shall be computed in whole years and full months.

Credited Service

All years of Service with the Employer from date of employment to the earliest of retirement, termination of employment, or death. Effective December 1, 1994, Credited Service shall be computed in whole years and full months. No participant shall earn any additional Credited Service beyond January 1, 2012.

Form of Annuity

Life Annuity.

Normal Retirement Date

The first day of the month coinciding with or next following the Participant's 65th birthday.

Participation Eligibility	An employee who is not subject to collective bargaining becomes a participant on the December 1 nearest attainment of age 21 and completion of one year of service, provided the participant has been credited with at least 1,000 Hours of Service. No new participants will enter the plan after January 1, 2012.
Benefit Formula	55% of Average Annual Compensation reduced proportionately if service at Normal Retirement Date is less than 15 years. Effective April 1, 2005, 50% of Average Annual Compensation proportionately reduced if service at Normal Retirement Date is less than 15 years. For participants entering the plan before 12/01/81, a paid-up annuity has been segregated representing benefits accrued to 11/30/81. This portion of the benefit will be subtracted from the benefit payable under this plan. Effective January 1, 2012, no future accruals can be earned by any participant.
Income Payable	Amount described in sections (a) or (b) below, whichever applies: a. If Participant has a Spouse as of his retirement date and does not elect otherwise, retirement income shall be paid on the basis of Joint and Survivor form, as stipulated by ERISA, and will be the amount determined under the benefit formula multiplied by the appropriate factor. b. If Participant either has no Spouse as of his retirement date or elects to receive this income under the Normal Form, retirement income will be the amount determined under the benefit formula.
Early Eligibility	Age 55 and 10 years of Vesting Service.
Early Benefit Amount	Normal retirement benefit accrued to early retirement, reduced by the ratio of Credited Service to early retirement date over Credited Service to Normal

Retirement Date. This benefit is further reduced by 1/15th for each of the first 5 years and 1/30th for each of the next 5 years that benefit commencement precedes Normal Retirement Date.

Vesting Schedule

Five years of Service equals 100% vesting.

Vested Benefit

Benefit accrued to date of termination based on the normal retirement formula, reduced by a ratio of Credited Service to date of termination over Credited Service to Normal Retirement Date. This benefit is further adjusted by the appropriate vesting percentage.

Preretirement Spouse Benefit

A. Eligibility

Active participant eligible for early retirement and married one full year at date of death.

Benefit Formula

The spouse or beneficiary of a participant who dies is entitled to a death benefit. This benefit is equal to the greater of the cash value of the participant's pre-1981 benefits and the present value of his accrued benefits or the actuarial equivalent of the pension benefit accrued to date of death reduced by the appropriate early retirement and joint & survivor factors. The spouse has the option of also choosing one of the optional forms of payment, other than the single sum payment.

The payment to the surviving spouse, if an annuity form is elected, shall begin as of the later of the first day of the month following the month in which the Participant dies or the first day of the month as of which the Participant could have elected to begin to receive his retirement benefits if he had survived. The payment to the surviving spouse, if a single sum payment is elected, shall be made within five years after the death of the participant.

A. Eligibility

Eligible for vesting but not eligible for early retirement, married one full year prior to death.

Benefit Formula

The spouse or beneficiary of a participant who dies is entitled to a death benefit. This benefit is equal to the greater of the cash value of the participant's pre-1981 benefits and the present value of his accrued benefits or the vested pension benefit accrued to date of death reduced by the appropriate early retirement and joint & survivor factors. The spouse has the option of also choosing one of the optional forms of payment, other than the single sum payment.

The payment to the surviving spouse, if an annuity form is elected, shall begin as of the later of the first day of the month following the month in which the Participant dies or the first day of the month as of which the Participant could have elected to begin to receive his retirement benefits if he had survived. The payment to the surviving spouse, if a single sum payment is elected, shall be made within five years after the death of the participant.

Cost of Living Adjustment

For all retired participants, and all spouses and beneficiaries eligible for annuity payments, the monthly amount of annuity payable will be subject to annual 4% cost of living adjustment for the first 10 years of retirement. Cost of Living Adjustments will not apply to benefits accrued on or after April 1, 2005.
