Discount rate sponsor elections		
• Segment rates or full yield curve	Segment	
• Look-back months	4	
	Stabilized	Nonstabilized
• First 5 years	4.75%	3.42%
• Next 15 years	5.00%	4.33%
• Over 20 years	5.74%	4.43%
Mortality sponsor elections	Section 430(h)(3) prescribed combined static annuitant and nonannuitant mortality tables. These tables are based on the RP-2006 mortality tables with IRS-developed adjustments and projected with mortality improvement scale MP-2021.	
417(e) lump sums	Liabilities are determined based on the underlying annuity used by the plan to determine the lump sum amount, rather than valuing the lump sum payment. This annuity is valued based on funding interest rates rather than 417(e) rates and current year 417(e) unisex mortality.	
Other economic assumptions		
• Salary increases	N/A	
• Flat-dollar benefit increases	N/A	
• Social Security wage base	N/A	
• Expected investment return	N/A	
• Expenses	\$95,824	
Demographic assumptions

• Active retirements	80%	20%

• Future disabilities	N/A	N/A
• Future deaths	100%	N/A
• Current vested deferred	80%	20%
Unpredictable contingent event assumptions	Not applicable	

Schedule SB, Part V — Statement of Actuarial Assumptions/Methods**Rationale for assumptions:**

- Expenses – This assumption is based on prior year experience, adjusted (if material for the purpose) for expected changes in the upcoming year.
- Benefit commencement age and form of payment – These assumptions are based on historical experience and the expectation that future retirements and benefit elections will not differ significantly from the past.

Actuarial methods**Asset methods**

The asset valuation method is the fair market value.

Participant methods

Participants or former participants are included or excluded from the valuation as described below:

- **Participants included:** The plan sponsor provides us with data on all employees as of the valuation date, but only those employees who have completed the plan's eligibility requirements are included in the valuation of liabilities.
- **Participants excluded:** No actuarial liability is included for nonvested participants who terminated prior to the valuation date. For this purpose, participants with a break in service on the valuation date are treated as terminated participants.
- **Insurance contracts:** The plan has insurance contracts for specified participants. The value of the contracts is included in the target liability and assets as per the plan sponsor's elections.
- **Disabled participants:** None.
- **Transferred participants:** None.

Minimum funding methods

The funding target for minimum funding calculations is computed using the traditional unit credit method of funding. The objective under this method is to fund each participant's benefits under the plan as they accrue. Thus, the total pension to which each participant is expected to become entitled at retirement is broken down into units, each associated with a year of past or future credited service.

A detailed description of the calculation follows:

- The plan's valuation date is the beginning of the plan year.
- An individual's **funding target** is the present value of future benefits based on credited service and average pay as of the beginning of the plan year, and an individual's **target normal cost** is the present value of the benefit expected to accrue in the plan year. If multiple decrements are used, the funding target and the target normal cost for an individual is the sum of the component funding targets and target normal costs associated with the various anticipated separation dates.
- The plan's **target normal cost** is the sum of the individual target normal costs, and the plan's **funding target** is the sum of the individual funding targets for all participants under the plan.
