Actuarial methods

Under the actuarial methods described below, if all current assumptions remain constant and are realized, funding at least the minimum required contribution each year will eventually accumulate sufficient plan assets to cover the funding target. Future widening of the interest rate stabilization corridor may extend the time period for the plan to become fully funded.

Cost method

Costs have been computed in accordance with the unit credit actuarial cost method and reflect the actuarial assumptions described under "Actuarial assumptions" of this report as provided under the applicable regulations of the Pension Protection Act of 2006.

Accrued vs. vested benefits

Accrued benefits are the benefits accumulated according to the service, compensation, and benefits outlined in the plan provisions. Vested benefits are the same except that they exclude the following, if applicable:

- Benefits for non-vested participants
- Death benefits over the value of the plan's qualified pre-retirement survivor annuity (QPSA)
- Disability benefits over the value of the standard termination or retirement benefits for participants who are not disabled as of the measurement date
- Benefits over the value of the standard termination benefits for participants who have not attained eligibility for early retirement and supplemental benefits as of the measurement date

Target normal cost

The target normal cost is the present value of benefits expected to accrue during the plan year plus an estimate of the expenses to be paid from plan assets during the plan year.

Funding target and funding shortfall

The funding target is the present value of benefits accrued as of the beginning of the plan year and the funding shortfall is the excess of the funding target over the actuarial value of assets (reduced by the credit balance). The initial funding shortfall is amortized over 15 years.

In subsequent years, the funding shortfall less the present value of prior year amortization installments is amortized over 15 years, and added to any prior year amortization installments.

Segment rates are adjusted as necessary to fall within the specified corridor of the corresponding 25-year average of segment rates for the period ending September 30 of the calendar year preceding the first day of the plan year. The specified corridor is listed on the following page:

Plan year	Corridor
Through 2030	95% - 105%
2031	90% - 110%
2032	85% - 115%
2033	80% - 120%
2034	75% - 125%
2035 and later	70% - 130%

In the event the 25-year average of either the first, second, or third segment rate falls below 5%, the 25-year average of such rate will be deemed to be 5%.

The adjustments to fall within the specified corridor of the 25-year average of segment rates apply for determining the minimum required contribution and related funded percentages. They do not apply for determining the maximum tax deductible contribution or certain other situations.

Sponsor elections

Discount rate: Segment rates, with no lookback

Mortality table: Prescribed IRS static mortality table – separate

At-risk determination

The at-risk funding target is determined by assuming that participants eligible to retire in the current plan year and next 10 plan years retire at the earliest possible date, but not before the end of the plan year. All participants are assumed to elect the optional form resulting in the highest possible present value.

A load is added to the at-risk funding target and at-risk target normal cost when a plan is at-risk in at least two years during the preceding four years. The load increases the at-risk funding target by 4% of the not at-risk funding target plus $700 per participant, and increases the at-risk target normal cost by 4% of the not at-risk target normal cost.

The funding target and target normal cost are calculated by multiplying the not at-risk values by 100% minus the phase-in percentage, plus the at-risk values multiplied by the phase-in percentage.

Credit balance

The credit balance consists of the carryover balance from excess contributions prior to the Pension Protection Act (PPA) of 2006, plus the prefunding balance from elected excess contributions after the PPA. Balances accumulate with interest and are reduced for amounts applied towards the minimum required contribution, voluntary waivers by the plan sponsor, and compelled waivers to avoid benefit restrictions. The actuarial value of assets is reduced by the credit balance to determine certain funded percentages and to determine the funding shortfall.

Asset valuation method

The actuarial value of assets is equal to the fair market value of assets.

The actuarial value of assets for determining the maximum tax deductible contribution reflects interest rate stabilization rates for discounting contributions and limiting expected earnings.

Actuarial assumptions

Funding assumptions:

The discount rate and mortality assumptions are prescribed assumptions set by law. All other assumptions are non-prescribed assumptions set by the actuary which reflect estimates of future experience, are appropriate for the purpose of the measurement, consider relevant plan characteristics, and contain no significant bias unless otherwise noted. Relevant historical information, such as credible plan experience and experience from representative populations, was considered in the selection of the non-prescribed assumptions with a significant effect on the measurement. Factors that may affect future experience and the views of experts were also considered.

An annual review of actuarial assumptions is completed and there has been no consistent pattern of material gains or losses occurring for any non-prescribed assumptions.

The investment return assumption reflects the expected return on plan assets and it considers the investment policy of Pilgrim's Pride including the asset allocation of the plan.

ASC 960 assumptions:

All assumptions are set by the plan sponsor and they align with the Funding Assumptions except for the mortality assumption and discount rate assumptions.

The mortality assumption reflects experience from representative populations, based on the Pri-2012 Private Retirement Plans Mortality Table Report issued by the Society of Actuaries (SOA) in October 2019 and the Mortality Improvement Scale MP-2021 Report issued by the SOA in October 2021.

The discount rate was compared to the effective discount rate determined by discounting plan cashflows using the 12/27/2024 Empower Above Mean Curve.

Below are the actuarial assumptions as of January 1, 2025:

Discount rate	**With interest rate stabilization**	**Without interest rate stabilization**	**ASC 960**
Effective Rate	5.25%	5.24%	2.00%
First Segment – First 5 Years	5.00%	5.00%	N/A
Second Segment – Next 15 Years	5.27%	5.27%	N/A
Third Segment – After 20 Years	5.50%	5.40%	N/A

A load is added to the at-risk funding target and at-risk target normal cost when a plan is at-risk in at least two years during the preceding four years. The load increases the at-risk funding target by 4% of the not at-risk funding target plus $700 per participant, and increases the at-risk target normal cost by 4% of the not at-risk target normal cost.

The funding target and target normal cost are calculated by multiplying the not at-risk values by 100% minus the phase-in percentage, plus the at-risk values multiplied by the phase-in percentage.

Credit balance

The credit balance consists of the carryover balance from excess contributions prior to the Pension Protection Act (PPA) of 2006, plus the prefunding balance from elected excess contributions after the PPA. Balances accumulate with interest and are reduced for amounts applied towards the minimum required contribution, voluntary waivers by the plan sponsor, and compelled waivers to avoid benefit restrictions. The actuarial value of assets is reduced by the credit balance to determine certain funded percentages and to determine the funding shortfall.

Asset valuation method

The actuarial value of assets is equal to the fair market value of assets.

The actuarial value of assets for determining the maximum tax deductible contribution reflects interest rate stabilization rates for discounting contributions and limiting expected earnings.

Actuarial assumptions

Funding assumptions:

The discount rate and mortality assumptions are prescribed assumptions set by law. All other assumptions are non-prescribed assumptions set by the actuary which reflect estimates of future experience, are appropriate for the purpose of the measurement, consider relevant plan characteristics, and contain no significant bias unless otherwise noted. Relevant historical information, such as credible plan experience and experience from representative populations, was considered in the selection of the non-prescribed assumptions with a significant effect on the measurement. Factors that may affect future experience and the views of experts were also considered.

An annual review of actuarial assumptions is completed and there has been no consistent pattern of material gains or losses occurring for any non-prescribed assumptions.

The investment return assumption reflects the expected return on plan assets and it considers the investment policy of Pilgrim's Pride including the asset allocation of the plan.

ASC 960 assumptions:

All assumptions are set by the plan sponsor and they align with the Funding Assumptions except for the mortality assumption and discount rate assumptions.

The mortality assumption reflects experience from representative populations, based on the Pri-2012 Private Retirement Plans Mortality Table Report issued by the Society of Actuaries (SOA) in October 2019 and the Mortality Improvement Scale MP-2021 Report issued by the SOA in October 2021.

The discount rate was compared to the effective discount rate determined by discounting plan cashflows using the 12/27/2024 Empower Above Mean Curve.

Below are the actuarial assumptions as of January 1, 2025:

Discount rate	**With interest rate stabilization**	**Without interest rate stabilization**	**ASC 960**
Effective Rate	5.25%	5.24%	2.00%
First Segment – First 5 Years	5.00%	5.00%	N/A
Second Segment – Next 15 Years	5.27%	5.27%	N/A
Third Segment – After 20 Years	5.50%	5.40%	N/A

Estimated expenses

Annual expenses expected to be paid from plan assets are assumed to be $60,000. Equal to prior year's actual expenses, plus any expected increase in the current year's PBGC premium.

Expected return on plan assets

2.00% per annum, but limited to the third segment rate for the applicable plan year.

Spouse's benefit

It is assumed that husbands are 3 years older than wives and that 80% of Participants who are or will become eligible for coverage under the Spouse's Benefit will be survived by an eligible spouse.

Plan provisions

Effective date	Established January 1, 1970. Amended and restated as of December 12, 1995. The last amendment, 16, is effective December 17, 2008.
Eligibility	Age 201/2 and six months of service. Participation is closed as of November 30, 1995.
Vesting service	1,000 hours of service.
Benefit accrual service	One year for which an eligible employee works at least 1,000 hours of service. Benefit service accruals ceased November 30, 1995.
Normal retirement date	First of the month coincident with or next following attainment of age 65.
Normal retirement benefit	A monthly benefit equal to 1.6% of the final average compensation multiplied by years of service.
Disability benefit	Upon qualification for Social Security disability benefits after 10 years of service. Disability benefit shall be based upon compensation and service as of date of disability. Service accruals for this benefit ceased November 30, 1995.

Death benefit

The survivor annuity is equal to one-half of the accrued benefit for a participant in the employ of the employer on his date of death and one-half of the vested accrued benefit for a participant that terminates employment on and after January 1, 1992.

If the participant's termination of employment occurred prior to January 1, 1992, benefit will be equal to the monthly amount that would have been payable to the if the participant's annuity commencement date had occurred on the day before his death and an annuity had been payable in the form of the joint and survivor annuity.

Early retirement benefit

Eligible at age 55 and five years of service.

The accrued benefit is actuarially reduced.
