EIN/PN: 34-0276860 / 025

Schedule SB, Part V – Statement of Actuarial Assumptions/Methods

Funding assumptions and methods selection and rationale

The following assumptions were selected by the plan's enrolled actuary. The asset valuation method was selected by the plan sponsor with the actuary's advice and is an acceptable method under the applicable provisions of the Internal Revenue Code and associated regulations.

The interest rates and mortality assumption used for this measurement are prescribed by law.

The economic assumption that has a significant effect on the measurement and that the actuary has selected is the expected rate of return on plan assets. The expected asset return assumption was based on an analysis of long term expected returns for the asset classes in which the plan's assets were invested as of the measurement date. Demographic and other non-economic assumptions having a significant impact on the measurement of the Funding Target are retirement rates and the frequency of optional forms of payment. These assumptions were originally chosen by the predecessor enrolled actuary and are based on the plan sponsor's anticipated experience. Actual experience is reviewed each year and compared to the assumption. Changes are then made, as appropriate, based on this review.

Use of Models

Gallagher uses third-party software in the performance of annual actuarial valuations and projections. The model is intended to calculate the liabilities associated with the provisions of the plan using data and assumptions as of the measurement date under the funding rules specified in this report. Further, the model applies those funding rules to the liabilities derived and other inputs, such as plan assets and contributions, to generate many of the exhibits found in this report. Gallagher has an extensive review process whereby the results of the liability calculations are checked using detailed sample output, changes from year to year are summarized by source, and significant deviations from expectations are investigated. Other funding outputs are similarly reviewed in detail and at a high level for accuracy, reasonability and consistency with prior results. Gallagher also reviews the model when significant changes are made to the software. The review is performed by experts within the company who are familiar with applicable funding rules as well as the manner in which the model generates its output.

Future actuarial measurements

Future actuarial measurements may differ significantly from current measurements due to plan experience differing from that anticipated by the actuarial assumptions, changes expected as part of the natural operation of the methodology used for these measurements, and changes in plan provisions, applicable law or regulations. An analysis of the potential range of such future differences is beyond the scope of this report. However, an assessment of risks for the plan was performed.

The interest rates used for funding purposes are the Segment Rates with 4-month lookback, constrained in accordance with relevant legislation.

Mortality

Mortality tables mandated by applicable law and regulation as specified in IRS Regulation 1.430(h)(3)-1, as amended in the Federal Register on October 20, 2023, in TD 9983, 88 FR 72357, and as amended by IRS Notice 2024-42, applied on a static basis, using the blended annuitant/non-annuitant table applicable to small plans.

Actuarial cost method

The Funding Target is the present value of accrued benefits based on compensation and service to date. The Target Normal Cost is the present value of benefits expected to be accrued during the current plan year, reflecting the effect of expected compensation increases during the year and including expected plan related expenses to be paid from plan assets during the year.

Expenses

Expected plan related expenses equal to prior year plan related expenses, excluding the prior year PBGC premiums plus current year PBGC premium were added to the Target Normal Cost. This amount is equal to $43,599.

Frequency of optional payment forms

Single participants elect a life annuity, and Married participants elect a 50% joint and survivor annuity.

70% of male participants and 55% of female participants are assumed to be married. Husbands are assumed to be 3 years older than their wives.

Retirement rates

Age	Rates

70	100.00%

Terminated Vested participants are assumed to retire at age 65

Disability rates

None.

Withdrawal rates for active participants not eligible for retirement

None.

Asset valuation method

The Actuarial Value of Assets is market value as of the valuation date, including the discounted value of accrued contributions, reduced by 2/3 of the gain/(loss) for the immediately preceding plan year and reduced by 1/3 of the gain/(loss) for the plan year before that. The gain/(loss) for each period is determined as the actual return on market value during the period less the expected return on market value based on an assumed earnings rate chosen by the actuary but required by current law and regulation to be not greater than the applicable third Segment Rate. The resulting value is constrained to be within a corridor of 90% to 110% of market value, including discounted receivable contributions.

	Actuary's Assumption	Third Segment Rate	Reflecting Limit
2025 Expected Return	7.50%	5.50%	5.50%
2024 Expected Return	7.50%	5.59%	5.59%
