Actuarial Assumptions and Methods

The valuation of a defined benefit pension plan involves estimates and assumptions about the probability of events occurring far into the future. Examples include assumptions about future employment, mortality, and retirement. Below is a description of the actuarial assumptions and methods used in the valuation.

Funding Target Liability

Valuation Date: January 1, 2025

Demographic Information: The demographic information was provided as of January 1, 2025 by United Texas Credit Union. Although we did not audit the data, we did review the data for reasonableness.

Actuarial Cost Method: As required by PPA, the Traditional Unit Credit Cost Method was used.

Asset Valuation Method: Market Value of Assets

Anticipated Rate of Return on Plan Assets: 6.00%, based on a review of the Plan's asset allocation, investment policy (as shown in the annual funding notice), and expected returns using recent capital market assumptions published by leading financial organizations.

Actuarial Valuation Software: For purposes of developing the projected future benefit payments as well as determining attributed liabilities and normal costs as of the valuation date, we utilized the ProVal software platform developed by Winklevoss Technologies. We believe this externally developed valuation system is appropriate, was used for its intended purpose, and did not produce unreasonable results.

Interest Rates for Minimum Required Contribution: The September 2024 funding segment rates were utilized as prescribed by IRC Section 430(h) and elected by United Texas Credit Union. Below, please find the segment rates after reflection of the segment rate stabilization provisions of IRC Section 430(h)(2)(C)(iv).

Segment	Interest Rate
Segment 1	5.07%
Segment 2	5.31%
Segment 3	5.50%

Effective Interest Rate
5.40%

Segment 1 is applied to benefit payments expected to be made in the first 5 years, segment 2 is applied to benefit payments expected to be made in the next 15 years and segment 3 is applied thereafter.

Interest Rates without reflection of the segment rate stabilization provisions of IRC Section 430(h)(2)(C)(iv): Below, please find the segment rates without reflection of the segment rate stabilization provisions of IRC Section 430(h)(2)(C)(iv). These rates were utilized to determine the low-default risk obligation measurement ("LDROM") of the accrued benefits as of the Valuation Date.

Segment	Interest Rate
Segment 1	5.07%
Segment 2	5.33%
Segment 3	5.36%

Effective Interest Rate
5.34%

Segment 1 is applied to benefit payments expected to be made in the first 5 years, segment 2 is applied to benefit payments expected to be made in the next 15 years and segment 3 is applied thereafter.

Rate of Compensation Increase: None assumed.

Pre-Retirement Mortality: None assumed.

Post-Retirement Mortality:

Base mortality table: The blended sex distinct Amount-Weighted Pri-2012 mortality tables for employees and healthy annuitants.

Mortality improvements: The base mortality table is adjusted by projecting mortality improvements using the IRS 2024 Adjusted Scale MP-2021 from the year 2012 through 2025, with an additional projection period of 8 years for males and 9 years for females. For ages below 80, the additional projection period is increased by 1 year for each year below age 80. For ages above 80, the additional projection period is reduced (but not below zero) by 1/3 year for each year above 80.

Retirement Incidence: The assumption utilized was determined by the prior actuary, Fidelity Investments. The rates used in this valuation are illustrated below:

Age	Percentage
55	6.00%
56	6.00%
57	6.00%
58	6.00%
59	10.00%
60	10.00%
61	15.00%
62	20.00%
63	15.00%
64	25.00%
65	100.00%

Current and future vested terminated participants are assumed to retire at age 65. Due to limited experience, the assumed retirement rates are consistent with those provided by the prior actuary.

Turnover: The assumption utilized was determined by the prior actuary, Fidelity Investments. Rates vary by age and service. Sample rates are shown below:

Age	Percentage
25	9.67%
30	9.30%
35	8.71%
40	7.75%
45	6.35%
50	4.22%

Due to limited experience, the assumed turnover rates are consistent with those provided by the prior actuary.

Disability: Rates of decrement due to disability are assumed to be 0%.

Assumptions used to Convert Annuities to Actuarially Equivalent Lump Sum Amounts: In accordance with IRS Regulation 1.430(d)-1(f)(5)(ii)(B), annuities are converted to actuarially equivalent lump sum amounts using the current applicable mortality table under IRC Section 417(e)(3) that would apply to a distribution with an annuity starting date occurring on the valuation date and the underlying valuation interest rates under IRC Section 430(h)(2).

Administrative Expenses: Actual plan expenses, not including investment advisory fees, paid out of the trust during the previous plan year rounded to the nearest thousand.

Form of Benefit: The assumed form of benefit was based on the Plan provisions and client expectations. 20% of future retirees and 5% of future terminated vested participants are expected to elect a life annuity. The remaining are assumed to take a lump sum. 100% of current terminated vested participants are expected to receive a monthly life annuity upon reaching normal retirement age.

All assumptions used in determining the low-default risk obligation measurement were consistent with those used in determining the Funding Target Liability, except the interest rates which were disclosed above.
