Actuarial Assumptions and Methods

ERISA Interest Rates as required by IRC Section 430 based on plan sponsor election of the look-back month for the segment rates:

"Minimum" means for the purpose of calculating the PPA funding liability and normal cost for the minimum required contribution.

"Maximum" means for the purpose of calculating the PPA funding liability and normal cost for the maximum tax-deductible contribution.

	2025 Plan Year		**2024 Plan Year**	
Purpose	Minimum	Maximum	Minimum	Maximum
Segment rates or full yield curve	Segment	Segment	Segment	Segment
Look-back months	0	0	0	0
First 5 years	5.00%	5.00%	4.75%	4.37%
Next 15 years	5.27%	5.27%	4.96%	4.96%
Over 20 years	5.50%	5.40%	5.59%	4.95%

Administrative Expenses: $40,000

Actuarial Assumptions and Methods (continued)

Mortality:

ERISA: IRS 2025 Small Plan Combined Static Mortality Table with no pre-commencement mortality (previously IRS 2024 Small Plan Combined Static Mortality Table with no pre-commencement mortality).

Retirement Rates: 100% retirement at age 65.

Termination: None

Marital Status: 100% of males and females are assumed married, with females 3 years younger than males.

Maximum Benefit: $280,000 for 2025. No future increases in the IRC Section 415 limit have been reflected.

Maximum Salary: $350,000 for 2025. No future increases in the salary limit have been reflected.

Form of Payment: It has been assumed benefits will be paid as a 100% joint and survivor annuity. To the extent participants are not married and elect a single life annuity and conversions are determined under an actuarial basis, which differs from the basis funded in the valuation, gains or losses will occur. These gains or losses will be recognized through the routine application of the actuarial cost method.

Actuarial Value of Plan Assets for Funding Purposes: The actuarial value of assets is equal to the market value of assets (including discounted employer contributions receivable) on the valuation date.

Shortfall Amortization Charge for ERISA Funding Purposes: Per IRC Section 430(c), the shortfall amortization charge for any plan year is the aggregate total (not less than zero) of the shortfall amortization installments for such plan year with respect to any shortfall amortization base which has not been fully amortized. The shortfall amortization installments are the amounts necessary to amortize the shortfall amortization base of the plan for any plan year in level annual installments over the 15-year period beginning with such plan year.

Actuarial Assumptions and Methods (continued)

Actuarial Cost Method: The unit credit cost method is used for ERISA funding target (FT). Under this method, accrued pension benefits are determined for all eligible active participants. These benefits reflect service, salary and negotiated benefit increases to date. The liability is then equal to the present value of accrued benefits (PVAB) for inactive participants plus the PVAB for active participants.

The normal cost is determined on an individual basis for all active participants who have not attained the assumed retirement age and is equal to the present value of the difference between the current accrued benefit and the anticipated accrued benefit one year later, with the accrued benefit based upon earnings, or negotiated benefit increases, to date in both cases. The total normal cost is based upon the sum of the individual normal costs. The target normal cost for funding is equal to the total normal cost plus assumed administrative expenses expected to be paid from the trust.

The projected unit credit method is used for IRS maximum deductible limit cushion amount. Under this method, accrued pension benefits are determined for all eligible active participants reflecting service to date and anticipated salary and negotiated benefit increases to the assumed retirement age. This liability for active participants is then added to the present value of all benefits for inactive participants to determine the total liability under this method.

The normal cost is determined on an individual basis for all active participants who have not attained the assumed retirement age and is equal to the present value of the difference between the current accrued benefit and the anticipated accrued benefit one year later, with the accrued benefit based upon earnings and negotiated benefit increases projected to assumed retirement age in both cases. The total normal cost is based upon the sum of the individual normal costs.
